

GENERAL INFORMATION

The elektraLite **Turbohazer** is a powerful effect machine designed to deliver robust, continuous atmospheric haze from a strong, industrial machine. Coverage of up to 250,000 cubic feet is possible all with one machine.

Duty-cycle rated for continuous use, the elektraLite **Turbohazer** uses non-toxic, water-based glycol fluid to eliminate contamination of nearby materials and prevent slippery surfaces. Only a simple wipe down of surfaces on a regular maintenance schedule is required. Fluid levels are maintained via an indicator on the tank, as well as protected by an electronic sensor within the elektraLite **Turbohazer** that alerts the operator via an indicator light when fluid levels are low and need to be replenished.

A remote control with a 6' cable is included with each elektraLite **Turbohazer**. The remote provides dial control of output level, interval timing (for more or less frequent continuous output), and duration (to control how long each interval generates output). Manual pushbuttons on the elektraLite **Turbohazer** remote also allow for forced continuous hazing, manual pushbutton control, and an on/off feature for the interval timing feature.

With a well-equipped 1.35L tank, the elektraLite **Turbohazer** is prepared to generate haze for a 24hour period with continuous operation. Protected internally, the pump and heater have electronic sensors to ensure power is supplied immediately when needed. Additional thermal sensors provide automatic shutdown protection in the event of overheating.

FEATURES

- dramatic coverage of 250,000 cubic feet
- remote control unit included
- uses water-based glycol fluid
- thermal overheat shutdown protection
- timer feature for setting up delay between output
- variable output, allowing small bursts or constant output
- electronic sensor, so power is supplied immediately for instant performance

fluid level indicator to monitor real-time fluid levels, as well as electronic sensor for low fluid indicator via status light

- 1.35L fluid tank capacity, sufficient for up to 24 hours of continuous use
- industrial grade design using corrosion resistant hardware

ORDERING INFORMATION

ELE417

Turbohazer (including remote control)

ELE417

Turbohazer

Atmospheric Haze Effect Machine

SPECIFICATIONS

- Power Consumption - 700 watts (3.4A)
- Electrical - multi-voltage; AC 100-240V – 50/60Hz
- Housing - anodized aluminum
- ABS polycarbonate
- Materials - corrosion resistant hardware
- Capacity - 0.35 gallons (1.33 liters)
- Protection - thermal shutdown overheat sensor
- Volume - 250,000 cubic feet
- Fluid(s) - water-based glycol
- (see HAZE FLUID section for details)
- Control - integrated remote control unit
- Ratings / Certifications - cETLus / CE

ACCESSORIES

Accessories Included with each Turbohazer are as follows:

- (1) remote control unit with 6’ integrated cable

HAZE FLUID

Only approved haze fluid should be used in the **Turbohazer**. These fluids have been tested and approved for proper operation with pumps, motors, tubing, and performance. Use of other non-approved fluids may result in a void of warranty. Material Safety Data Sheets (MSDS) are available from elektraLite upon request.

- Antari Jem smoke fluid (manufactured by Martin)
- Atmosphere (manufactured by High End)
